SUMMER 2026 NEWSLETTER

Keep Your Lawn Healthy All Summer Long!

TODAY'S LAWN APPLICATION

Today's fertilizer application is specially formulated to help your lawn withstand the heat and stress of summer without forcing excessive growth.

If you ordered Grub Prevention, it was applied today as well.

DON'T FORGET TO WATER!

Both fertilizer and grub prevention are granular products and must be watered into the soil to become effective. If rain isn't expected within the next day or two, please water your lawn thoroughly.

SUMMER HAS ARRIVED

This spring's cool temperatures and frequent rainfall gave lawns an excellent start. However, many lawns experienced overly wet soil conditions that can contribute to disease, shallow roots, and poor drainage—especially in clay soils.

Now that warmer temperatures and drier weather have arrived, proper mowing and watering become the keys to maintaining a healthy lawn throughout the summer.

PROTECT YOUR FAMILY THIS SUMMER

Summer brings fleas, ticks, and many other nuisance insects.

Our Natural Cedar-Based Yard Guard program helps reduce:

- ✓ Ticks
- ✓ Fleas

Protect your family, pets, and outdoor living spaces naturally.

We also offer Foundation Insect Treatments to help prevent ants and other crawling insects from entering your home.

Call us to learn more.

GRUB SEASON IS HERE

Adult beetles will soon begin laying eggs that hatch into lawn-damaging grubs.

Protect your lawn before damage begins by adding our Organic Grub Prevention treatment.

Call the office for details.

MOW HIGH

Don't mow the color out of your lawn.

Most lawns in Western New York perform best when maintained between 3–4 inches.

Benefits include:

- ✓ Greener color
- ✓ Deeper roots
- ✓ Better drought tolerance
- ✓ Fewer weeds

WATER DEEPLY

Water slowly and deeply rather than lightly every day.

During dry weather, soak your lawn for 1–2 hours once or twice each week, depending on rainfall.

Pay special attention to:

- Sunny areas
- Hillsides
- Around trees
- Garden beds

SIGNS YOUR LAWN NEEDS WATER

- Bluish-gray color
- Footprints remain after walking
- Grass feels dry or crunchy
- Soil is dry more than 2–3 inches below the surface

HEALTHY SOIL = HEALTHY LAWN

SANDY SOIL

Improve water and nutrient retention with:

- Organic Soil Builder
- Compost Bio-Activator
- Lime (if recommended by your soil test)

Our Natural Liquid Aeration improves water penetration, root growth, and overall soil health without mechanical core aeration.

Great for both clay and sandy soils!

CLAY SOIL

Heavy clay soils become compacted and restrict root growth.

We recommend:

- Organic Soil Builder
- Compost Bio-Activator
- Liquid Compost
- Natural Liquid Aeration

LAB SOIL TEST = SMARTER LAWN CARE

A lab soil test tells us exactly what your soil needs—nothing guessed, nothing wasted.

Benefits of following your soil test recommendations:

- ✓ Improves lawn color
- ✓ Strengthens root development
- ✓ Increases disease resistance
- ✓ Optimizes nutrient use
- ✓ Saves money and protects the environment

If you've had one of our laboratory soil tests performed, now is the perfect time to apply the recommended nutrients.

Need help understanding your results?

Give us a call—we're happy to review them with you.

Summer Special!

10% OFF
ALL ORGANIC TREATMENTS!
INCLUDES (with your lab soil test recommendations)

Natural Aeration
